## 1 Overview Trainings

### 1.1 E-Learning

We offer the basic module and the advanced module "Statics and Design" as e-learning trainings on the learning platform MoodleCloud. The trainings are in English and can be attended individually. Below you will find a manual for self-registration for the courses.

### 1.2 TS3-Training Application technique

We offer training courses for TS3 application technique at the Balteschwiler AG factory in Laufenburg. In the one-day training, we show you all the tips and tricks for pre-treatment and joint grouting, and you learn what you need to pay attention to during CLT production and assembly. After the training, you will receive a certificate as a TS3 application technician.

### 1.3 Learning documents

For on-site training and knowledge transfer, we have target group-specific brochures for architects, engineers and application.
